

FDF221-9, FDF241-9

Sinteso™
Cerberus® PRO

DA Infrared flame detectors ASA Infrared flame detectors

addressable or collective, conventional *ASAtechnology*™

-
- DA FDF221-9 Flame detector for simple inside applications, detection with one infrared sensor und detection algorithms
 - ASA FDF241-9 Flame detector for the most demanding application (inside and outside), detection with 3 infrared sensors and *ASAtechnology*
 - Excellent immunity to false alarms thanks to a combination of fuzzy logic and Wavelet analysis
 - Event-controlled detection behavior
 - Microprocessor-controlled signal evaluation
 - Two-wire installation for all types of cable
 - Communication via FDnet/C-NET (individual addressing), or collective, conventional signal processing

Characteristics

- **Environmental**

- ecologically processing
- recyclable materials
- electronic and synthetic material simple separable

- **Characteristics**

- the detector housing made of aluminum also serves as a screen against electro-magnetic interference (EMB)
- the base housing consists of a robust, glass-fiber reinforced synthetic material
- protected electronics
- built-in alarm indicator (AI)
- integrated line separator
- addressable and collective, conventional signal processing

FDF221-9 DA Infrared flame detector

- **Function**

- 1 infrared sensor with detection algorithms

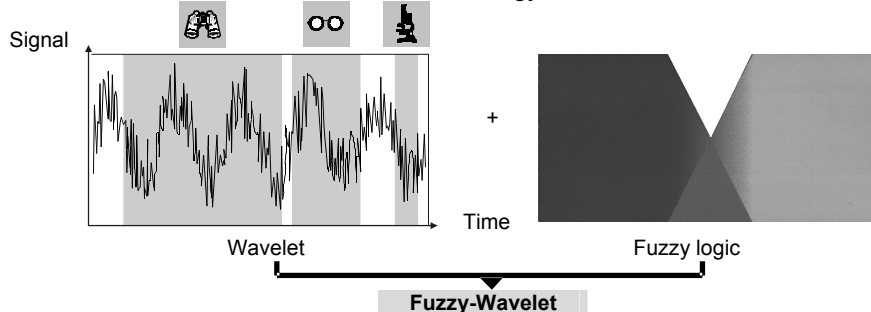

- **Application**

- for simple applications, additional to smoke detectors
- Detection of smokeless combustible liquid and gas fires, as well as smoke-forming open fire involving carbonaceous materials as contained in wood, plastics, gases, oil products etc.
- only used without source of interference as sun, halogen light, blackbody radiation

FDF241-9 ASA Infrared flame detector

- **Function**

- 3 infrared sensors with **ASA** technology

The detection elements of the infrared flame detector consist of two pyroelectric sensors and a silicon photo diode.

Sensor A:

The pyroelectric sensor A reacts to infrared flame gas in the characteristic CO₂ spectral range between 4.0... 4.8 μm.

Sensor B:

The pyroelectric B measures the infrared radiation of sources of interference in the range between 5.1... 6 μm

Sensor C:

The silicon photo diode measures the solar radiation in the range between 0.7... 1.1 μm

- One sensor measures the hot carbon dioxide in a specific flame wavelength; the two other sensors simultaneously measure the interference radiation in other wave-lengths.
- With intelligent signal processing through fuzzy algorithms and wavelet analysis, the FDF241-9 achieves excellent detection reliability while maintaining the highest immunity to interference radiation and sunlight.
- In order to safeguard against a possible decision emergency, the detector contains an additional emergency activation channel.

● **Application**

- Detects smokeless liquid and gas fires as well as smoke-generating open fires resulting from the combustion of carbonaceous materials such as wood, synthetics, gases, oil products, etc.
- large industrial warehouses
- chemicals production plants
- chemicals stores
- petrol storage and pump stations
- arc welding workshops
- ferries and cargo boats
- ships' engine rooms
- underground tunnels
- power plants
- transformer stations
- printing works
- motor test beds
- malls
- wood stores
- hangars for military and civil aircraft

Accessories

The test lamp LE3 is used to make a performance check on the flame detector at a distance of up to 10 m.

Installation

- easy installation of the housing on stable, vibration-free surfaces; the detector is only inserted after installation check, shortly before commissioning
- 6 threads M20 for screwed cable glands
- connection via two-wire installation with the control unit
- ext. alarm indicator connectable
- pluggable connection between flame detector and base
- mounting bracket MV1 for room surveillance to fix the detector at the correct angle
- ball and socket joint MWV1 for the orientation to an object
- rain hood DFZ1190 protects the detector in outside applications
